
JMA-7100 series ARPA radar

Complies with SOLAS carriage requirements for vessels under 10,000 GT, and fully meets MSC 192(79) radar performance standards effective from 1 July 2008.

– JRC's new and powerful radar greatly increases performance, but keeps operation simple

19–inch high visibility display
Constaview™ digital signal processing
TEF™ multi-level target enhancement
High speed version available
Wide dynamic range receiver

JMA-7100 series

– performance features

Unique features

- JRC's new JMA-7100 ARPA radar series integrates the latest leading technologies and represents a significant step change in terms of reliable performance and cost-effectiveness, making it one of the most advanced radar products available today.

Constaview™

The second generation and patented Constaview™ is realised through the use of three high-speed processors (in-house Tornado™ technology). All info gathered by the radar is fully processed within a few milliseconds before displayed, generating a smooth image rotation when sailing in Head-Up mode. When changing to North-Up, the new radar image is displayed without any delay caused by the scanner rotation.

Real time Head-Up mode

Constaview™

True Trails

Constaview™ refreshes the image every 16mS. Despite heading changes trails are always true.

Conventional

Relative Trails

Traditional technology relies on several sweeps of the scanner to redraw the image. Trails are presented as relative.

Select a trail length

Other ship's movement and speed can be monitored from length and direction of their trails, primary serving for collision avoidance. The JMA-7100 radar series integrates three different trail length modes, that will show a ship's course instantly, a unique operational feature that allows for more flexibility. Example real-time processing:

• 1 min.

• 3 min.

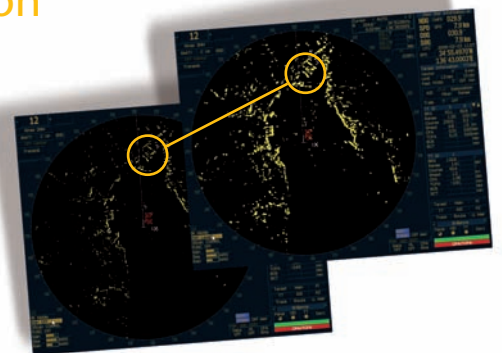

• 6 min.

• 10 min.

Target Enhancement Function™

Developed exclusively by JRC, TEF™, allows target enhancement relative to the target size. The smaller echoes are far more enlarged than bigger echoes, giving a better on-screen separation and identification.

JMA-7100 series

– developed for maximum ease of use

Flexible black box configuration

The radars are available in standalone and desktop version to suit your type of vessel. In the desktop version, the processor unit is the heart of the JMA-7100, and shares the same simple configuration as its predecessor, contributing to an enhanced system configuration. Optional TT (Target Tracking) function module with up to 100 targets, and or AIS interface can be built-in.

• Saturation of noises on receiver

• Wide dynamic range

Wide dynamic range receiver

The new JMA-7100 series integrates a wide dynamic range receiver that, compared to conventional models, significantly improves the differentiation of noise and targets under sea clutter. The radar system overcomes different sources of unwanted signals, maintaining a constant level of clutter suppression.

More powerful than ever

The JMA-7100 incorporates three Tornado™ processors, which are exclusively developed and designed by JRC, bringing a new level of performance and reliability to radar operation. The new Tornado™ processors, which equal the power of twelve conventional processors, and advanced system architecture make the JMA-7100 series probably the most sophisticated radar available today.

CCRP

As set by IMO regulations, a Consistent Common Reference Point (CCRP) is a location on own ship, to which all horizontal measurements, such as target range, bearing, relative course/speed, closest point of approach, or time to closest point of approach are referenced.

Where multiple antennas are installed, different position offsets for each antenna in the radar system should be applied with respect to the CCRP. If you switch between scanners (up to 8 possible - option), the information displayed is generated allows for consistency and uniform output. This new feature is easily accessible from the menu.

Interswitching

Optional interswitching up to 8 displays possible.

JMA-7100 series

– easy user interface

New keyboard design

With its new case design, the keyboard of the JMA-7100 series allows you to carry out all radar operations simply by using the keyboard or on-screen by use of the trackball.

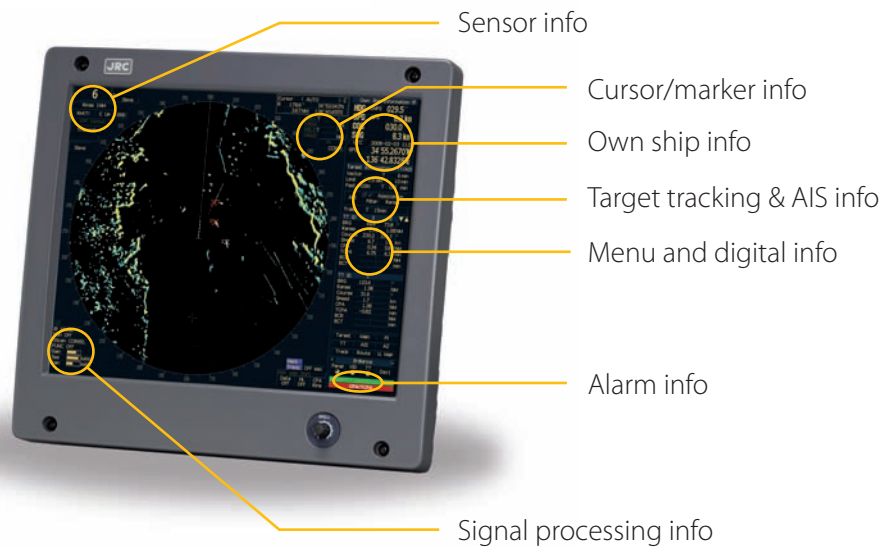

The responsive feel keys allow logical and precise operation and integrates function keys for one-touch access to EBL, VRM, GAIN, SEA and RAIN. This makes it easy to navigate through all common used tasks.

Clear on-screen info

The JMA-7100 series make your radar images more brilliant than ever with a sharp 19" high resolution LCD screen.

Menu selections, via the keyboard or trackball are clearly shown on the display - allowing "at a glance" interpretation of the radar image.

You can also select from multiple background modes e.g. day/dusk/night and adjust the brilliance at your own convenience.

JRC StarNetwork™

JRC has been providing sales and support of products since 1915. Today, JRC offers comprehensive assistance through its organisation, in partnership with a worldwide StarNetwork™ of over 270 fully trained and qualified partners and agents, assisting you 24 hours a day, 7 days a week and 365 days a year.

 **JRC one-call™**

One number to call

With JRC you can go anywhere and if you need our support, simply call us at +81 3 3492 9201, anytime.

JMA-7100 series

– system flexibility

Theme based navigation

With JRC's new radar series you don't have to settle for one constant setting throughout, integrating four navigation themes, facilitating the most optimised radar image, particularly valuable to the dynamically changing conditions. For specific areas, decide on coastal or deep-sea mode and for weather, JRC has a storm and rain mode integrated. JRC-designed themes are easy to customise, so you can adjust and set your radar image exactly as you want.

More built-in ergo-flexibility

The trackball is designed to work in perfect harmony with the operating system. One of the new features in this radar series is that you can effortlessly assign commonly used functions to the left mouse button, giving you the capability to access a preferred function without having to take your hand off the trackball. You can assign and reassign this multi-button with a range of operational features, which among others are AIS info, TT ACQ, show TT data, property, make mark.

TT = Target Tracking = ARPA

What's standard in the box?

JRC sets the highest standards for performance and flexibility. With our new JMA-7100 series, you have five key choices to select from, allowing you to 'configure' your favoured radar system – from unit type to desktop or stand alone – making it more than ideal for your preferred installation approach.

Your choices

- 2-unit or 3-unit type?
- transmitting power?
- X-band or S-band?
- conventional or high-speed¹?
- desktop or stand alone?

Models available

- 2-unit **6**
3-unit **3**
- 10kW **2**
25kW **5**
30kW **2**
- X-band **7**
S-band **2**
- conventional **7**
high-speed **2**
- **both** versions available in all 9 models
